

S-BASIC  
BASICODE-2  
( 20 kb )

28,447

BASICODE was developed by NOS / Netherlands ( Nederlandse Omroep Stichting ) around 1979 to exchange BASIC programs between different computers ( e.g. C64 to Sharp MZ's and vice versa ) without any hardware. The Dutch radio broadcasting service Radio Hilversum ( 1,008 kHz ) and later others ( e.g. the WDR / West Germany and the GDR ) sent BASIC programs over the air using BASICODE. Some tiny hardware ( interface ) was needed to transfer the software to the computer.

I have no documentation about this ( Dutch ) S-BASIC which is able to use the BASICODE version 2. It seems to be compatible to the S-BASIC 1Z-013B. The BASIC text area starts at \$6BCF.

```
***S-BASIC/VERTALER BASICODE-2.**  
SHARP MZ-700/800  
  
35822 bytes  
Ready
```
